At Mathficast Software Services Limited, we are specialised in forecasting solutions for finance sector. We have started our journey with the following questions: How would you forecast the future performance of your investment funds? How would you decide when the best time is to buy or sell a specific stock option or commodity future? How would you know in advance about a share trade that may potentially lead to a disaster under current volatile market conditions? How would you forecast the growth of your investment funds?

Presumably you already have well established methodologies to tackle the challenging questions highlighted above. No matter what your solutions are, we believe our powerful innovative forecasting software will help you to find better and more certain answers to those questions. Our product will be a further reinforcement to protect you and your investors under current volatile conditions. We have proudly developed one of the world's most powerful forecasting software platforms, Mathficast 1.0.0.0. Our product provides one of the most accurate forecasts of future trends of commodity or stock prices. No matter what your current forecasting

confidence bands and performance are, our software will improve it further. It will help you to boost your ROI. Whatever your existing forecasting software or methodologies are, our product will provide an alternative strong opinion or a sanity check on your existing forecasts, i.e. improving the certainty of your forecasts. We believe our product will complement your existing forecasting methodologies. It is our belief that when two or more very different forecasting platforms agree, then there is a strong chance that you have the best forecast results in your hands with the best confidence bands. Our software helps you to enhance your revenue flow by informing you about the risk associated with the future investments. It helps our customers to pick the best stock, commodity or the best investment with the highest level of certainty possible. Our forecasting software relies on revolutionary, automated and non-traditional exception and driver handling mechanisms to achieve the lowest level of risk associated with our forecasts. Our goal at Mathficast Software Services Limited is to help you to have a better vision of future and to be prepared with the best strategy before the disaster and uncertainty strike.

Mathficast™ 1.0.0.0

Time Machine Helping you to See the Future™

Mathficast 1.0.0.0 is a revolutionary forecasting software platform helping you to perform the most accurate forecasts. By helping you to know what about to happen, Mathficast 1.0.0.0 helps you to boost your business revenue by selecting the most suitable strategies. We proudly claim that we have made impossible possible by creating the world's most powerful forecasting solution.

We live in a world dominated by uncertainties. Financial markets have been subject to credit crunch and turbulences. Businesses, industries and governments worldwide are anxious to know the future and select suitable strategies in response. Mathficast Software Services Limited is proud to introduce Mathficast™ 1.0.0.0 as one of

the world's most powerful forecasting tools if not the world's most powerful forecasting tool to help global organizations come up with the best vision for future. Although Mathficast™ is designed primarily for financial forecasting, it can be employed for wide range of other applications as presented below.

Mathficast Forecasting Solutions

Mathficast™ is a desktop software platform which helps analysts, managers and researchers to perform the most reliable and accurate forecasts. Mathficast forecasting platform Mathficast employs two different and independent classes of forecasting methods helping to exploit the data to be analysed from different perspectives. Each class includes a number of forecasting schemes which looks at the future and the past from slightly different vision. When those methods come to agreement the result is an unbeatable accuracy of forecast with minimised uncertainties.

Benefits

- Capable of generating up to 500 forecasts in each run
 - Specially designed to tackle the most sophisticated and challenging forecasting problems
 - Suitable for any executive or analyst within financial industry or other industries without a mathematical background
 - It is extremely user friendly and easy to learn.
 - We have gone all the way to let you have forecast results in click of a button
 - You don't need to be a mathematical genius to perform forecasts; our software platform will join your team as the genius member
- Mathficast produces reliable forecasts
 - Credited as one of the world's most powerful forecasting solutions

- The forecasts are generated in minutes regardless of the nature of data
- It is easy and simple to run it from your desktop
- It provides the forecasts with minimum human interface and on an automatic way.
- It uses its own powerful and easy-to-use built in graphic tool
- Generates both graphic and numeric forecast results
- Capable of accepting up to seven columns of numeric data in line with leading financial data available from websites such as Google or Yahoo.
- Simple input data in txt data file format
- Easy to save result format
- Capable of exporting the results to environments such as Microsoft PowerPoint or Microsoft Word

of all the attempts regardless of the grouping.

Mathficast Methodologies

Two different methodologies performed by Mathficast are:

- Data Oriented Forecast
- Time Machine based Forecast

The forecast process may include four steps: User may only perform a single forecast and stop the process if the results match his/her judgment and expectations. If not, the user may perform more extended forecasts according to the Steps 2 and 3 presented in next page. If satisfactory matching results obtained from Steps 2 and 3, the forecast results will be considered to have high reliability. If there is no agreement between the two groups of functions, according to Step 4, the user may employ the managerial judgment to choose the best forecast. In this case, the best forecast is selected from the most similar clusters of forecasts

Example for Mathficast Forecasting

Typical Forecast of Share Value of Daimler's stock value:

Figure 5 show the input data curves is subject to forecast. The input data consists of 1058 data points. 3 days ahead forecast is being performed at the day, 17.03.2008:

Input Data for Daimler Forecast

The 3-days ahead forecast results for two data oriented methods are presented in the following figure:
